

The listing of claims will replace all prior versions, and listings, of claims in the application:

**Listing of Claims:**

1. (Currently Amended) A display device comprising:  
a source signal line driving circuit;  
a pixel portion;  
a shift register included in said source signal line driving circuit for outputting a pulse in accordance with clock signals;  
a level shifter included in said source signal line driving circuit for converting a voltage amplitude of input signals; and  
a current source ~~[[for]]~~ configured such that supplying a current to said level shifter is controlled based on the pulse from the shift register;  
~~wherein when said shift register serially outputs the pulses, said current source supplies the current and said level shifter is operated.~~
2. (Previously Presented) A display device according to claim 1, wherein said source signal line driving circuit and said pixel portion are provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.
3. (Previously Presented) A display device according to claim 1, wherein said driving circuit and said pixel portion are provided over a same substrate.
4. (Previously Presented) A display device according to claim 1, wherein said driving circuit and said pixel portion are provided over different substrates.

5. (Previously Presented) A display device according to claim 1, wherein said display device is a liquid crystal display device.

6. (Previously Presented) A display device according to claim 1, wherein said display device is incorporated into a personal computer.

7. (Previously Presented) A display device according to claim 1, wherein said display device is incorporated into a portable information terminal.

8. (Previously Presented) A display device according to claim 1, wherein said display device is incorporated into a car audio set.

9. (Previously Presented) A display device according to claim 1, wherein said display device is incorporated into a digital camera.

10. (Currently Amended) A display device comprising:  
a source signal line driving circuit;  
a pixel portion;  
first to x-th (x: natural number,  $x \geq 2$ ) units included in said source signal line driving circuit;  
a plurality of shift registers included in the a-th (a: natural number,  $1 \leq a \leq x$ ) unit for outputting a pulse in accordance with clock signals;  
a plurality of level shifters included in said a-th unit for converting a voltage amplitude of input signals; and  
an a-th current source ~~provided for~~ configured such that supplying a current to said plurality of level shifters is controlled based on the pulse from the shift registers;

~~wherein when said plurality of shift registers in said a<sup>th</sup> unit serially outputs the pulses, said a<sup>th</sup> current source supplies the current and said level shifters are operated.~~

11. (Previously Presented) A display device according to claim 10, wherein said source signal line driving circuit and said pixel portion are provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

12. (Previously Presented) A display device according to claim 10, wherein said driving circuit and said pixel portion are provided over a same substrate.

13. (Previously Presented) A display device according to claim 10, wherein said driving circuit and said pixel portion are provided over different substrates.

14. (Previously Presented) A display device according to claim 10, wherein said display device is a liquid crystal display device.

15. (Previously Presented) A display device according to claim 10, wherein said display device is incorporated into a personal computer.

16. (Previously Presented) A display device according to claim 10, wherein said display device is incorporated into a portable information terminal.

17. (Previously Presented) A display device according to claim 10, wherein said display device is incorporated into a car audio set.

18. (Previously Presented) A display device according to claim 10, wherein said display device is incorporated into a digital camera.

19.-36. (Canceled)

37. (Currently Amended) A display device comprising:

a gate signal line driving circuit;

a pixel portion;

a shift register included in said gate signal line driving circuit for outputting a pulse in accordance with clock signals;

a level shifter included in said gate signal line driving circuit for converting a voltage amplitude of input signals; and

a current source ~~[[for]]~~ configured such that supplying a current to said level shifter is controlled based on the pulse from the shift register;

~~wherein when said shift register serially outputs the pulses, said current source supplies the current and said level shifter is operated.~~

38. (Previously Presented) A display device according to claim 37, wherein said gate signal line driving circuit and said pixel portion are provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

39. (Previously Presented) A display device according to claim 37, wherein said driving circuit and said pixel portion are provided over a same substrate.

40. (Previously Presented) A display device according to claim 37, wherein said driving circuit and said pixel portion are provided over different substrates.

41. (Previously Presented) A display device according to claim 37, wherein said display device is a liquid crystal display device.

42. (Previously Presented) A display device according to claim 37, wherein said display device is incorporated into a personal computer.

43. (Previously Presented) A display device according to claim 37, wherein said display device is incorporated into a portable information terminal.

44. (Previously Presented) A display device according to claim 37, wherein said display device is incorporated into a car audio set.

45. (Previously Presented) A display device according to claim 37, wherein said display device is incorporated into a digital camera.

46. (Currently Amended) A display device comprising:  
a gate signal line driving circuit;  
a pixel portion;  
first to y-th (y: natural number,  $y \geq 2$ ) units included in said gate signal line driving circuit;  
a plurality of shift registers included in the d-th (d: natural number,  $1 \leq d \leq y$ ) unit for outputting a pulse in accordance with clock signals;  
a plurality of level shifters included in said d-th unit for converting a voltage amplitude of input signals; and  
a d-th current source configured such that supplying a current to said plurality of level shifters is controlled based on the pulse from the shift registers;

~~wherein when said plurality of shift registers in said d-th unit serially outputs the pulses, said d-th current source supplies the current and said level shifters are operated.~~

47. (Previously Presented) A display device according to claim 46, wherein said gate signal line driving circuit and said pixel portion are provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

48. (Previously Presented) A display device according to claim 46, wherein said driving circuit and said pixel portion are provided over a same substrate.

49. (Previously Presented) A display device according to claim 46, wherein said driving circuit and said pixel portion are provided over different substrates.

50. (Previously Presented) A display device according to claim 46, wherein said display device is a liquid crystal display device.

51. (Previously Presented) A display device according to claim 46, wherein said display device is incorporated into a personal computer.

52. (Previously Presented) A display device according to claim 46, wherein said display device is incorporated into a portable information terminal.

53. (Previously Presented) A display device according to claim 46, wherein said display device is incorporated into a car audio set.

54. (Previously Presented) A display device according to claim 46, wherein said display device is incorporated into a digital camera.

55.-72. (Canceled)

73. (Currently Amended) A display device comprising:

a source signal line driving circuit;

a pixel portion;

a decoder included in said source signal line driving circuit for outputting a pulse in accordance with input signals;

a level shifter included in said source signal line driving circuit for converting a voltage amplitude of the input signals; and

a current source ~~[[for]]~~ configured such that supplying a current to said level shifter is controlled based on the pulse from the decoder;

~~wherein when said decoder serially outputs the pulses, said current source supplies the current and said level shifter is operated.~~

74. (Previously Presented) A display device according to claim 73, wherein said source signal line driving circuit and said pixel portion are provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

75. (Previously Presented) A display device according to claim 73, wherein said driving circuit and said pixel portion are provided over a same substrate.

76. (Previously Presented) A display device according to claim 73, wherein said driving circuit and said pixel portion are provided over different substrates.

77. (Previously Presented) A display device according to claim 73, wherein said display device is a liquid crystal display device.

78. (Previously Presented) A display device according to claim 73, wherein said display device is incorporated into a personal computer.

79. (Previously Presented) A display device according to claim 73, wherein said display device is incorporated into a portable information terminal.

80. (Previously Presented) A display device according to claim 73, wherein said display device is incorporated into a car audio set.

81. (Previously Presented) A display device according to claim 73, wherein said display device is incorporated into a digital camera.

82. (Currently Amended) A display device comprising:  
a source signal line driving circuit;  
a pixel portion;  
first to x-th ( $x$ : natural number,  $x \geq 2$ ) units included in said source signal line driving circuit;  
a plurality of decoders included in the a-th ( $a$ : natural number,  $1 \leq a \leq x$ ) unit for outputting a pulse in accordance with input signals;  
a plurality of level shifters included in said a-th unit for converting a voltage amplitude of the input signals; and  
an a-th current source ~~[[for]]~~ configured such that supplying a current to said plurality of level shifters is controlled based on the pulse from the decoders,

~~wherein when said plurality of decoders in said a-th unit serially outputs the pulses, said a-th current source supplies the current and said level shifters are operated.~~

83. (Previously Presented) A display device according to claim 82, wherein said source signal line driving circuit and said pixel portion are provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

84. (Previously Presented) A display device according to claim 82, wherein said driving circuit and said pixel portion are provided over a same substrate.

85. (Previously Presented) A display device according to claim 82, wherein said driving circuit and said pixel portion are provided over different substrates.

86. (Previously Presented) A display device according to claim 82, wherein said display device is a liquid crystal display device.

87. (Previously Presented) A display device according to claim 82, wherein said display device is incorporated into a personal computer.

88. (Previously Presented) A display device according to claim 82, wherein said display device is incorporated into a portable information terminal.

89. (Previously Presented) A display device according to claim 82, wherein said display device is incorporated into a car audio set.

90. (Previously Presented) A display device according to claim 82, wherein said display device is incorporated into a digital camera.

91.-108. (Canceled)

109. (Currently Amended) A display device comprising:

a gate signal line driving circuit;

a pixel portion;

a decoder included in said gate signal line driving circuit for outputting a pulse in accordance with input signals;

a level shifter included in said gate signal line driving circuit for converting a voltage amplitude of the input signals; and

a current source ~~provided for~~ configured such that supplying a current to said level shifter is controlled based on the pulse from the decoder;

~~wherein when said decoder serially outputs the pulses, said current source supplies the current and said level shifter is operated.~~

110. (Previously Presented) A display device according to claim 109, wherein said gate signal line driving circuit and said pixel portion are provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

111. (Previously Presented) A display device according to claim 109, wherein said driving circuit and said pixel portion are provided over a same substrate.

112. (Previously Presented) A display device according to claim 109, wherein said driving circuit and said pixel portion are provided over different substrates.

113. (Previously Presented) A display device according to claim 109, wherein said display device is a liquid crystal display device.

114. (Previously Presented) A display device according to claim 109, wherein said display device is incorporated into a personal computer.

115. (Previously Presented) A display device according to claim 109, wherein said display device is incorporated into a portable information terminal.

116. (Previously Presented) A display device according to claim 109, wherein said display device is incorporated into a car audio set.

117. (Previously Presented) A display device according to claim 109, wherein said display device is incorporated into a digital camera.

118. (Currently Amended) A display device comprising:  
a gate signal line driving circuit;  
a pixel portion;  
first to y-th ( $y$ : natural number,  $y \geq 2$ ) units included in said gate signal line driving circuit;  
a plurality of decoders included in the d-th ( $d$ : natural number,  $1 \leq d \leq y$ ) unit for outputting a pulse in accordance with input signals;  
a plurality of level shifters included in said d-th unit for converting a voltage amplitude of the input signals; and  
a d-th current source ~~provided for~~ configured such that supplying a current to said plurality of level shifters is controlled based on the pulse from the decoders;

~~wherein when said plurality of decoders in said d-th unit serially outputs the pulses, said d-th current source supplies the current and said level shifters are operated.~~

119. (Previously Presented) A display device according to claim 118, wherein said gate signal line driving circuit and said pixel portion are provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

120. (Previously Presented) A display device according to claim 118, wherein said driving circuit and said pixel portion are provided over a same substrate.

121. (Previously Presented) A display device according to claim 118, wherein said driving circuit and said pixel portion are provided over different substrates.

122. (Previously Presented) A display device according to claim 118, wherein said display device is a liquid crystal display device.

123. (Previously Presented) A display device according to claim 118, wherein said display device is incorporated into a personal computer.

124. (Previously Presented) A display device according to claim 118, wherein said display device is incorporated into a portable information terminal.

125. (Previously Presented) A display device according to claim 118, wherein said display device is incorporated into a car audio set.

126. (Previously Presented) A display device according to claim 118, wherein said display device is incorporated into a digital camera.

127.-144. (Canceled)

145. (Currently Amended) A semiconductor device comprising:

~~a driving circuit;~~

a shift register ~~included~~ for outputting a pulse in accordance with clock signals;

a level shifter ~~included~~ for converting a voltage amplitude of input signals; and

a current source ~~provided for~~ configured such that supplying a current to said level shifter is controlled based on the pulse from the shift register;

~~wherein when said shift register serially outputs the pulses, said current source supplies the current and said level shifter is operated.~~

146. (Previously Presented) A semiconductor device according to claim 145, wherein said driving circuit is provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

147. (Previously Presented) A semiconductor device according to claim 145, wherein said semiconductor device is a liquid crystal display device.

148. (Previously Presented) A semiconductor device according to claim 145, wherein said display device is incorporated into a personal computer.

149. (Previously Presented) A semiconductor device according to claim 145, wherein said display device is incorporated into a portable information terminal.

150. (Previously Presented) A semiconductor device according to claim 145, wherein said display device is incorporated into a car audio set.

151. (Previously Presented) A semiconductor device according to claim 145, wherein said display device is incorporated into a digital camera.

152. (Currently Amended) A semiconductor device comprising:

~~a driving circuit;~~

first to x-th ( $x$ : natural number,  $x \geq 2$ ) units;

a plurality of shift registers included in the a-th ( $a$ : natural number,  $1 \leq a \leq x$ ) unit for outputting a pulse in accordance with clock signals;

a plurality of level shifters included in said a-th unit for converting a voltage amplitude of input signals; and

an a-th current source ~~[[for]]~~ configured such that supplying a current to said plurality of level shifters is controlled based on the pulse from the shift registers;

~~wherein when said plurality of shift registers in said a-th unit serially outputs the pulses, said a-th current source supplies the current and said level shifters are operated.~~

153. (Previously Presented) A semiconductor device according to claim 152, wherein said driving circuit is provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

154. (Previously Presented) A semiconductor device according to claim 152, wherein said semiconductor device is a liquid crystal display device.

155. (Previously Presented) A semiconductor device according to claim 152, wherein said display device is incorporated into a personal computer.

156. (Previously Presented) A semiconductor device according to claim 152, wherein said display device is incorporated into a portable information terminal.

157. (Previously Presented) A semiconductor device according to claim 152, wherein said display device is incorporated into a car audio set.

158. (Previously Presented) A semiconductor device according to claim 152, wherein said display device is incorporated into a digital camera.

159. (Currently Amended) A semiconductor device comprising:  
a driving circuit;  
a decoder included in said driving circuit for outputting a pulse in accordance with input signals;  
a level shifter included in said driving circuit for converting a voltage amplitude of the input signals; and  
a current source ~~provided for~~ configured such that supplying a current to said level shifter is controlled based on the pulse from the decoder;  
~~wherein when said decoder serially outputs the pulses, said current source supplies the current and said level shifter is operated.~~

160. (Previously Presented) A semiconductor device according to claim 159, wherein said driving circuit is provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

161. (Previously Presented) A semiconductor device according to claim 159, wherein said semiconductor device is a liquid crystal display device.

162. (Previously Presented) A semiconductor device according to claim 159, wherein said display device is incorporated into a personal computer.

163. (Previously Presented) A semiconductor device according to claim 159, wherein said display device is incorporated into a portable information terminal.

164. (Previously Presented) A semiconductor device according to claim 159, wherein said display device is incorporated into a car audio set.

165. (Previously Presented) A semiconductor device according to claim 159, wherein said display device is incorporated into a digital camera.

166. (Currently Amended) A semiconductor device comprising:  
a driving circuit;  
first to x-th ( $x$ : natural number,  $x \geq 2$ ) units included in said driving circuit;  
a plurality of decoders included in the a-th ( $a$ : natural number,  $1 \leq a \leq x$ ) unit for outputting a pulse in accordance with input signals;  
a plurality of level shifters included in said a-th unit for converting a voltage amplitude of the input signals; and  
an a-th current source ~~provided for~~ configured such that supplying a current to said plurality of level shifters is controlled based on the pulse from the decoders;  
~~wherein when said plurality of decoders in said a-th unit serially outputs the pulses, said a-th current source supplies the current and said level shifters are operated.~~

167. (Previously Presented) A semiconductor device according to claim 166, wherein said driving circuit is provided over a member selected from the group consisting of a glass substrate, a plastic substrate, a stainless steel substrate and a single crystal wafer.

168. (Previously Presented) A semiconductor device according to claim 166, wherein said semiconductor device is a liquid crystal display device.

169. (Previously Presented) A semiconductor device according to claim 166, wherein said display device is incorporated into a personal computer.

170. (Previously Presented) A semiconductor device according to claim 166, wherein said display device is incorporated into a portable information terminal.

171. (Previously Presented) A semiconductor device according to claim 166, wherein said display device is incorporated into a car audio set.

172. (Previously Presented) A semiconductor device according to claim 166, wherein said display device is incorporated into a digital camera.

173. (Previously Presented) A display device according to claim 1, wherein said source signal line driving circuit comprises thin film transistors.

174. (Previously Presented) A display device according to claim 10, wherein said source signal line driving circuit comprises thin film transistors.

175. (Previously Presented) A display device according to claim 37, wherein said gate signal line driving circuit comprises thin film transistors.

176. (Previously Presented) A display device according to claim 46, wherein said gate signal line driving circuit comprises thin film transistors.

177. (Previously Presented) A display device according to claim 73, wherein said source signal line driving circuit comprises thin film transistors.

178. (Previously Presented) A display device according to claim 82, wherein said source signal line driving circuit comprises thin film transistors.

179. (Previously Presented) A display device according to claim 109, wherein said gate signal line driving circuit comprises thin film transistors.

180. (Previously Presented) A display device according to claim 118, wherein said gate signal line driving circuit comprises thin film transistors.

181. (Previously Presented) A semiconductor device according to claim 145, wherein said driving circuit comprises thin film transistors.

182. (Previously Presented) A semiconductor device according to claim 152, wherein said driving circuit comprises thin film transistors.

183. (Previously Presented) A semiconductor device according to claim 159, wherein said driving circuit comprises thin film transistors.

184. (Previously Presented) A semiconductor device according to claim 166, wherein said driving circuit comprises thin film transistors.

185. (Currently Amended) A semiconductor device comprising:

a shift register for outputting a pulse in accordance with clock signals;  
a level shifter for converting a voltage amplitude of input signals;  
a current source which supplies configured such that supplying a current to said  
level shifter is controlled based on input of a the pulse from the shift register; and  
a latch circuit into which a signal is output signals of said level shifter are inputted  
through said level shifter.

186. (Currently Amended) A display device comprising:  
a shift register for outputting a pulse in accordance with clock signals;  
a level shifter for converting a voltage amplitude of input signals;  
a current source which supplies configured such that supplying a current to said  
level shifter is controlled based on input of a the pulse from the shift register; and  
a latch circuit into which an image signal is output signals of said level shifter are  
inputted through said level shifter,  
wherein said image signal is written into a pixel.

187. (Currently Amended) A semiconductor device comprising:  
a shift register for outputting a pulse in accordance with clock signals;  
a level shifter for converting a voltage amplitude of input signals;  
a current source which supplies configured such that supplying a current to said  
level shifter is controlled based on input of a the pulse from the shift register;  
a first latch circuit into which a signal is output signals of said level shifter are  
inputted through said level shifter; and  
a second latch circuit into which output signals of said first latch circuit [[is]] are  
inputted.

188. (Currently Amended) A display device comprising:  
a shift register for outputting a pulse in accordance with clock signals;

a level shifter for converting a voltage amplitude of input signals;

a current source ~~which supplies~~ configured such that supplying a current to said level shifter is controlled based on input of a the pulse from the shift register;

a first latch circuit into which ~~a signal is~~ output signals of said level shifter are inputted ~~through said level shifter;~~ and

a second latch circuit into which output signals of said first latch circuit ~~[[is]]~~ are inputted,

~~wherein said signal is written into a pixel.~~
